DETAILED ACTION

Claim Objections

Claim 2 is objected to because of the following informalities: the term substantially on line 3 is objected. Suggest removal of term. Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Henly (US 6,394,421 B1).

Henly discloses a chain wheel part 103 comprising a disk 105, a plurality of teeth, as seen in Figure 6, the teeth not extending to the perimeter of the disk, and a plurality of spines, the spines being positioned on at least some of the teeth and extending to or adjacent the periphery of the disk.

In regards to claim 2, Henly discloses the teeth mounted on a central portion of the disk displaced from the plane of the disk and the spines are positioned on the outer most extremity of a tooth on which they are placed, the spine extending down an outwardly facing face of a tooth, and across a peripheral area of the disk, as seen in Figure 6.

Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Henly (US 6,098,962).

Henly discloses a chain wheel part comprising a disk 28, a plurality of teeth, as seen in Figure 8, the teeth not extending to the perimeter of the disk, and a plurality of spines, the spines being positioned on at least some of the teeth and extending to or adjacent the periphery of the disk.

In regards to claim 2, Henly discloses the teeth mounted on a central portion of the disk, displaced from the plane of the disk and the spines are positioned on the outer most extremity of a tooth on which they are placed, the spine extending down an outwardly facing face of a tooth, and across a peripheral area of the disk, as seen in Figure 8.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
